

Final Project Submission

CS3490: Programming Languages

Due: The time of the final exam

Submit your final project. Include all of the code files and test inputs as well as the final report. Upload them to ASULearn before you present. (If you are in section 101 and are presenting on Monday the 6th, you can take another day or two for the report if you need to. But the sooner you submit it the sooner I can grade it.)

Your report should not be too long, two or three pages should suffice for most projects. Think of it as just explaining exactly what you have done when talking with another coder. Avoid any unnecessary language or words.

However, the report should include the following items.

1. A precise description of what your program does, as well as the user interface, i.e., how to run it. Think of this part as the README file that you would write if you posted your project on Github.
2. A brief description of how your program is organized. (Again, think of this as a guide to other programmers wanting to understand your code.) Here you could include the code of the main function, and the types of other critically important functions, along with a one-sentence description of what they do.
3. If research was a significant part of your project, include a section where you summarize your research findings. Make sure to cite all the sources properly. ***Failure to cite the sources is considered plagiarism and will result in failing the class.***
4. Discussion. Here you should point the reader's attention to what were the most difficult parts of the project, including which implementation details had you stuck or forced to research topics online, and how you were able to overcome these problems. This is a good place to highlight those parts of the code that you are particularly proud of.
5. Any other items you wish to discuss, like future extensions or what alternative approaches you would take in hindsight.
6. In the conclusion, give a quick summary of the project, and what you have learned from doing it.

Again, don't say more than what is necessary to communicate all of the points above.
